COORDINATION OF SCIENTIFIC RESEARCH ON PROBLEMS OF COMPLEX MECHANIZATION OF COAL MINING

B. A. Rozentreter

The Mining Institute, frademy of Sciences USSR, held a conference at the end of October 1948 on the coordination of scientific research on problems of complex mechanisation of coal mining.

It was reported that work on these problems is being carried out on a large scale in the scientific research institutes of the Academy of Sciences USSR, in the republic academies of sciences, in the branch scientific research and planning-designing institutes of the coal industry, in the coal-machinery plants, and directly in the mires. The following machines are manufactured in serial production: KMP-1 and MV-60 cutting machines, the KM-4-6M coal combine designed by Mekarcv, the CUK-1 coel combine designed by Corebkov, Sukach, and Khoria, the VFS-1 cutting and loading machine, see types of scrapes compare, electric drills, ordinary drills, and the FEL-5, 8-15, UKC-1 and other loading machines.

A number of important measures have been outlined for the development of a laboratory and production base for scientific research: establishment of the All-Union Scientific-Research Coal Institute (VUGI) and the Donets Scientific Resparch Coal Institute (DONUGI), construction of experimental plants, designation of experimental mines in the Moscow, Karaganda, Kixel, and Kuznetsk coal basins for scientific research and planning institutes, and also experimental sections in producing mines, e.g., Kuznetsk Basin, Cherenkhovo.
